

# Dahua DeepHub Education Suite

## Overview

Dahua DeepHub Education Suite is designed for interactive teaching using a smart interactive whiteboard. It has powerful lesson preparation and teaching functions that enable teachers to create engaging lessons using a variety of templates for both in-person and online classes.

## Functions

### Abundant teaching tools

It provides not only the commonly used drawing, math and measurement tools (rulers, protractors, etc.) but also diverse activity templates, helping teachers to create their own courseware that allow the interaction of mobile devices and making each class more interactive.

### Courseware production and presentation

It supports real-time insertion of local and online images, videos, or recorded audios directly into the courseware, allowing students to understand the course content more intuitively. It also supports synchronizing files to the Cloud in order to avoid possible data loss.

### Rich teaching resources

There are a variety of teaching resources in the software library (available in both English and Spanish) that teachers can use to plan their lessons.

### Ease of use

Teachers can flexibly edit, move, lock, unlock, and flip the content (text, image, etc.) on the screen. They can also take screenshots of the content and paste it into other files.

### In-class quiz

Teachers can generate concept maps based on their lesson plan and create quizzes for their students, helping them to keep abreast of their students' learning progress.

### Instant interaction

Students can participate in activities sent by their teachers and interact through their own devices. They can directly draw or annotate on the courseware, which can help improve their concentration during the class.

### Safe cloud storage

The content of each lesson can be uploaded to the Cloud so that students can download it directly to aid their after-class review. All content materials are automatically encrypted for data security.

### Multiple languages

Dahua DeepHub Education Suite supports multiple languages including English, Spanish, etc.
