

Run A Safer And More Profitable Gas Station

Dahua SMB gas station solution

Gas station requires a great deal of safety measures. In case of an emergency, like fire or robbery, an efficient alarm system is a must. Detecting dangerous scenarios like fire or smoking, as well as identifying blocklisted individuals shall be implemented in the whole establishment. Nevertheless, it is hard to rely on employees to do all of this with such high accuracy. The station manager needs an intelligent monitoring system that can realize public safety maintenance and dangerous individual identification.
